Abstracts

Proton therapy is an advanced form of radiation therapy that uses high-energy proton beam rather than conventional radiotherapy to irradiate a tumor. The unprecedented demand of proton therapy for the treatment of cancer has set the stage for the market to move ahead at a rapid pace. The main advantage of proton therapy is that while destroying the target malignant cells, it causes minimal damage to the surrounding cells. Proton therapy uses the ionization technique to inhibit cell proliferation. Protons move slowly through the body and interact with electrons and discharge energy.

The number of proton therapy centers is increasing globally. Still, industry experts believe that players will miss out on a majority of cancer patients who can benefit with proton therapy, overlooking a huge multi-Billion-dollar potential market. Globally, the numbers of patients treated with Proton Therapy is very low whereas; the potential candidates for proton therapy are in Millions. IBA dominates the proton therapy market globally. However other players like Varian, Mitsubishi, Mevion, Hitachi etc. have also started to make their presence felt in the market. The increased demand for proton therapy has motivated many prominent cancer centers in the world to provide proton therapy treatment. The number of proton therapy centers worldwide is anticipated to increase year on year, which in turn, will result in more clinical research, better clinician understanding and greater patient awareness of its benefits-which will help drive the further growth.

This is the 3rd edition report on Proton Therapy Market by iGATE RESEARCH. The report titled "Proton Therapy Market Outlook – Global Analysis" provides a comprehensive assessment of the fast-evolving, high-growth Proton Therapy Market.
