## Abstracts

Russia represents huge opportunity for proton therapy treatment owing to a large population base of cancer patients. Proton therapy is an advanced treatment of tumors which minimizes the risks and increases the chances of the oncology patient, ensuring a better quality of life not only during but especially after the treatment. The main advantage of proton beams is the precise irradiation, most energy being given purely onto the tumour. In comparison with existing radiation methods, protons save the surrounding healthy tissue. The continuing exploration of the benefits of proton therapy is inspiring a growing and massive construction of new proton centers across Russia. In Russia, 3 proton therapy centers are operational while another 3 centers are in under construction/planned phase.

iGATE RESEARCH report titled “Russia Proton Therapy Market (Actual & Potential), Patients Treated, List of Proton Therapy Centers and Forecast to 2022” provides a comprehensive assessment of the fast-evolving, high-growth Proton Therapy Market.
