Abstracts

The global acrylamide monomer market size reached US\$ 4.7 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 9.9 Billion by 2032, exhibiting a growth rate (CAGR) of 8.3% during 2024-2032.

Acrylamide monomer (or acrylic amide) is a colourless and odourless chemical compound formed by the hydration of acrylonitrile. It is soluble in water, alcohol and acetone but immiscible in benzene and heptanes. Although it is stable at room temperature, it can violently polymerize at its melting point or under UV light. The global acrylamide monomer market is currently being driven by its uses in diverse industries. One of the major factors boosting the growth of this market is the use of acrylamide monomer in the synthesis of polyacrylamide which is further used in wastewater treatment. Due to increasing environmental regulations which demand the industrial and municipal plants to limit their waste, the industrialised countries are now turning towards the use of polyacrylamide in their wastewater treatment. The report provides a comprehensive insight into the industry including its market break-up by region, market breakup by end-uses, value chain analysis, import and export trends, key players and market outlook. The report also gives an in-sight into the manufacturing process of acrylamide monomer covering key success and risk factors for manufacturers, manufacturing process flow, the reactions involved, raw materials and their requirements, etc.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global

acrylamide monomer market report, along with forecasts at the global and regional level from 2024-2032. Our report has categorized the market based on end-use.
