Abstracts

The 7 major adrenal cortex neoplasms markets are expected to exhibit a CAGR of 2.15% during 2024-2034.

The adrenal cortex neoplasms market has been comprehensively analyzed in IMARC's new report titled "Adrenal Cortex Neoplasms Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Adrenal cortex neoplasms are a group of rare tumors that arise from the outer layer of the adrenal gland. This gland is located on top of each kidney and plays a crucial role in producing various hormones that regulate metabolism, blood pressure, and stress response. Individuals suffering from the ailment may experience abdominal pain, unintentional weight loss, headaches, heavy sweating, excessive hair growth (in women), high blood pressure, hormonal imbalances, etc. Various other symptoms of the illness include a feeling of fullness, difficulty breathing, muscle weakness, trouble sleeping, decreased appetite, heart palpitations, fatigue, nervousness, etc. The diagnosis of adrenal cortex neoplasms usually involves a combination of the patient's medical history, characteristic findings, and a physical examination. Several blood and urine workups may be performed to evaluate hormone levels and assess the functioning of the adrenal glands. These investigations can include dexamethasone suppression tests, 24-hour urine collection, hormone assays, etc. In certain cases, the healthcare provider will recommend a tissue biopsy to confirm the diagnosis and determine the nature of the tumor.

The increasing cases of genetic conditions, which cause rearrangements in genes that affect normal cellular functions and promote tumor formation, are primarily driving the adrenal cortex neoplasms market. In addition to this, the inflating utilization of hormone replacement therapy since it aims to replace or supplement the deficient hormones,

such as cortisol and aldosterone, among patients is also creating a positive outlook for the market. Moreover, the widespread adoption of whole-exome sequencing techniques, which enable the simultaneous analysis of multiple genes or even the entire genome to identify novel mutations or fusion genes that might be causing the disease, is further bolstering the market growth. Apart from this, the rising usage of immune checkpoint inhibitors to help in activating the immune system as well as allowing it to recognize and attack cancerous cells more effectively is acting as another significant growth-inducing factor. Additionally, the emerging popularity of targeted therapies that are more precise in their mechanism of action, aiming at specific molecules or receptors involved in tumor growth, is expected to drive the adrenal cortex neoplasms market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the adrenal cortex neoplasms market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for adrenal cortex neoplasms and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the adrenal cortex neoplasms market in any manner.
