Market Overview:

The global aircraft cabin lighting market size reached US\$ 1.1 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1.5 Billion by 2028, exhibiting a growth rate (CAGR) of 4.9% during 2023-2028.

The aircraft cabin lighting system is essential to providing an optimal in-flight experience since it offers a pleasant travel experience and facilitates a variety of leisure activities for passengers. An aircraft's cabin lighting systems broadly include emergency lighting, ordinance signs, lavatory lights, specialty lighting, reading lights, signage lights, ceiling lights, floor path lights, and lavatory lights. Since night travel at cruising altitudes requires adequate illumination for passenger service, high quality lighting enhances the travel experience and helps retain customers. In order to increase customer satisfaction levels and offer innovative value-added services, airline operators are now increasingly installing advanced cabin lighting systems.

Aircraft Cabin Lighting Market Trends:

The market is majorly driven by the escalating demand for improved passenger experience in commercial airlines. This can be attributed to the rising numbers of passengers opting for air travel and the high demand for domestic passenger aircraft with extended routes. In line with this, the increasing demand for low-cost, AI-based interior lighting system technology in the aviation industry is fueling the market. The advent of advanced LED lighting over conventional aircraft cabin lights is also driving the demand for the retrofit market, thereby resulting in a higher uptake of cabin lighting solutions. Apart from this, rapid urbanization, along with inflating per capita disposable

income levels, are creating a positive outlook for the market. The market is further driven by a considerable rise in government investments to establish commercial aircraft manufacturing facilities. Some of the other factors contributing to the market growth include the augmenting number of domestic flights, considerable growth in the aviation industry, low production cost of LED bulbs, and extensive research and development (R&D) and merger and acquisition (M&A) activities by the key players.
