Abstracts

The 7 major alpha-1 antitrypsin deficiency markets reached a value of US\$ 1.4 Million in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 3.9 Million by 2034, exhibiting a growth rate (CAGR) of 9.83% during 2024-2034.

The alpha-1 antitrypsin deficiency market has been comprehensively analyzed in IMARC's new report titled "Alpha-1 Antitrypsin Deficiency Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Alpha-1 antitrypsin deficiency (AATD) refers to a genetic disorder characterized by decreased levels or malfunctioning of the alpha-1 antitrypsin protein, which leads to a higher risk of developing lung and liver diseases. The most common manifestation is lung disorder, which can include chronic obstructive pulmonary disease (COPD), emphysema, chronic bronchitis, etc. Individuals with AATD may experience various symptoms, such as shortness of breath, wheezing, coughing, recurring respiratory infections, etc. In some cases, the ailment can also affect the liver, leading to liver diseases characterized by jaundice, fatigue, and abdominal swelling. The diagnosis of alpha-1 antitrypsin deficiency typically consists of a combination of clinical evaluation, laboratory investigations, and genetic analysis. Numerous laboratory tests, such as alpha-1 antitrypsin protein level measurement and protease inhibitor activity assays, can provide initial indications of deficiency. A confirmatory diagnosis includes genetic testing to identify mutations in the SERPINA1 gene, which encodes the alpha-1 antitrypsin protein. Additionally, various other procedures, such as lung function tests, imaging studies, liver function tests, etc., may be performed to assess the extent of lung or liver involvement.

The rising cases of genetic mutations that result in the production of abnormal protein

variants, thereby leading to an imbalance of protease enzymes in the body, are primarily driving the alpha-1 antitrypsin deficiency market. Apart from this, the widespread adoption of augmentation therapy, which involves regular intravenous infusions of purified alpha-1 antitrypsin protein, to protect the lungs from damage caused by an imbalance of protease enzymes, is acting as another significant growth-inducing factor. Additionally, the increasing utilization of pulmonary rehabilitation programs involving exercises and breathing techniques for improving lung function, developing physical endurance, and optimizing overall respiratory health is also augmenting the market growth. Moreover, several key players are making significant investments in R&D activities to introduce disease-modifying therapies that focus on reducing the accumulation of misfolded alpha-1 antitrypsin protein within cells and enhancing the clearance of abnormal protein aggregates. This, in turn, is creating a positive outlook for the market. Besides this, the emerging popularity of expanded genetic panels since they allow the identification of rare or novel mutations in addition to the commonly screened mutations, thereby improving the accuracy of genetic diagnosis, is expected to drive the alpha-1 antitrypsin deficiency market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the alpha-1 antitrypsin deficiency market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for alpha-1 antitrypsin deficiency and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the alpha-1 antitrypsin deficiency market in any manner.

Time Period of the Study

Base Year: 2023

Historical Period: 2018-2023

Market Forecast: 2024-2034

Countries Covered

United States
Germany
France
United Kingdom
Italy
Spain
Japan

Analysis Covered Across Each Country

Historical, current, and future epidemiology scenario

Historical, current, and future performance of the alpha-1 antitrypsin deficiency market

Historical, current, and future performance of various therapeutic categories in the market

Sales of various drugs across the alpha-1 antitrypsin deficiency market

Reimbursement scenario in the market

In-market and pipeline drugs

Competitive Landscape:

This report also provides a detailed analysis of the current alpha-1 antitrypsin deficiency marketed drugs and late-stage pipeline drugs.

In-Market Drugs

Drug Overview

Mechanism of Action

Regulatory Status

Clinical Trial Results

Drug Uptake and Market Performance

Late-Stage Pipeline Drugs

*Kindly note that the drugs in the above table only represent a partial list of

marketed/pipeline drugs, and the complete list has been provided in the report.

Key Questions Answered in this Report:

Market Insights

How has the alpha-1 antitrypsin deficiency market performed so far and how will it perform in the coming years?

What are the markets shares of various therapeutic segments in 2023 and how are they expected to perform till 2034?

What was the country-wise size of the alpha-1 antitrypsin deficiency market across the seven major markets in 2023 and what will it look like in 2034?

What is the growth rate of the alpha-1 antitrypsin deficiency market across the seven major markets and what will be the expected growth over the next ten years?

What are the key unmet needs in the market?

Epidemiology Insights

What is the number of prevalent cases (2018-2034) of alpha-1 antitrypsin deficiency across the seven major markets?

What is the number of prevalent cases (2018-2034) of alpha-1 antitrypsin deficiency by age across the seven major markets?

What is the number of prevalent cases (2018-2034) of alpha-1 antitrypsin deficiency by gender across the seven major markets?

What is the number of prevalent cases (2018-2034) of alpha-1 antitrypsin deficiency by type across the seven major markets?

How many patients are diagnosed (2018-2034) with alpha-1 antitrypsin deficiency across the seven major markets?

What is the size of the alpha-1 antitrypsin deficiency patient pool (2018-2023) across the seven major markets?

What would be the forecasted patient pool (2024-2034) across the seven major markets?

What are the key factors driving the epidemiological trend of alpha-1 antitrypsin deficiency?

What will be the growth rate of patients across the seven major markets?

Alpha-1 Antitrypsin Deficiency: Current Treatment Scenario, Marketed Drugs and Emerging Therapies

What are the current marketed drugs and what are their market performance?

What are the key pipeline drugs and how are they expected to perform in the coming years?

How safe are the current marketed drugs and what are their efficacies?

How safe are the late-stage pipeline drugs and what are their efficacies?

What are the current treatment guidelines for alpha-1 antitrypsin deficiency drugs across the seven major markets?

Who are the key companies in the market and what are their market shares?

What are the key mergers and acquisitions, licensing activities, collaborations, etc. related to the alpha-1 antitrypsin deficiency market?

What are the key regulatory events related to the alpha-1 antitrypsin deficiency market?

What is the structure of clinical trial landscape by status related to the alpha-1 antitrypsin deficiency market?

What is the structure of clinical trial landscape by phase related to the alpha-1 antitrypsin deficiency market?

What is the structure of clinical trial landscape by route of administration related to the alpha-1 antitrypsin deficiency market?
