## **Abstracts**

The global alternators market size reached US\$ 17.7 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 23.4 Billion by 2028, exhibiting a growth rate (CAGR) of 4.97% during 2023-2028.

Alternators refer to devices which convert mechanical energy into electrical energy. The working principle of alternators depends upon Faraday's law of electromagnetic induction in which the current is induced in the conductor surrounded by a magnetic field when there is a relative motion. Alternators find applications in electric generators; automotive, marine, gas and oil industries; power plants; etc.

Due to the increasing consumption of alternating current in different sectors, such as automotive, gas, industrial manufacturing, etc., the demand for alternators has witnessed a positive growth across the globe. Another key growth-inducing factor is the growing investment in grid infrastructure in the developing regions. Apart from this, modern day vehicles are equipped with an alternator which is driven by the engine to provide alternating current. Rising disposable incomes and prevalence of a luxurious lifestyle have led to a surge in the sales of vehicles over the years. Moreover, rising industrialisation along with growth in cogeneration offer new opportunities, thereby creating an attractive market for the alternators.
