Abstracts

The 7 major anovulation markets reached a value of US$ 1.3 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US$ 4.5 Billion by 2034, exhibiting a growth rate (CAGR) of 12.29% during 2024-2034.

The anovulation market has been comprehensively analyzed in IMARC's new report titled "Anovulation Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Anovulation, a common hormonal imbalance in menstruating individuals, refers to a medical condition in which a woman's ovaries do not release an egg (ovum) during the menstrual cycle. This disruption can lead to irregular or absent periods, affecting fertility and overall reproductive health. The symptoms of anovulation vary but often include irregular menstrual cycles, prolonged periods, or even missed periods. Additionally, individuals suffering from the illness may experience changes in their menstrual flow, such as heavy or light bleeding. Hormonal imbalances can also result in physical manifestations like acne, increased hair growth, or weight fluctuations. Diagnosing anovulation typically involves a comprehensive assessment of menstrual patterns and associated symptoms. Additionally, hormone level testing, such as measuring follicle-stimulating hormone (FSH), luteinizing hormone (LH), estradiol, etc., is recommended to aid in confirming the absence of ovulation. Physicians might further conduct imaging techniques like ultrasound to observe the ovaries for signs of ovulation or the development of follicles.

The escalating incidences of disrupted ovulation patterns within the female reproductive system, attributed to hormonal imbalances and irregularities in the hypothalamic-pituitary-ovarian axis, are primarily driving the anovulation market. In addition to this, the inflating utilization of efficacious interventions, such as ovulation-inducing medications,

hormone therapies, and lifestyle adjustments, which are aimed at restoring normal ovulatory functions, is also creating a positive outlook for the market. Moreover, the widespread adoption of assisted reproductive techniques, encompassing treatments like in vitro fertilization (IVF) and intrauterine insemination (IUI), since they specifically address disease-related infertility concerns, is further bolstering the market growth. Apart from this, the rising usage of advanced diagnostic technologies, including hormonal assays and ultrasound imaging, to accurately assess ovulatory status and identify underlying causes of the ailment in patients is acting as another significant growth-inducing factor. Additionally, the emerging popularity of innovative approaches like ovarian drilling procedures and acupuncture to stimulate regular ovulation patterns and enhance the quality of life for individuals suffering from the disorder is also augmenting the market growth. Furthermore, the escalating understanding of anovulation's intricate mechanisms, coupled with the growing array of effective interventions ranging from pharmaceutical to lifestyle-oriented, is expected to drive the anovulation market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the anovulation market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for anovulation and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the anovulation market in any manner.

Analysis Covered Across Each Country

Historical, current, and future epidemiology scenario
Historical, current, and future performance of the anovulation market
Historical, current, and future performance of various therapeutic categories in the market
Sales of various drugs across the anovulation market
Reimbursement scenario in the market
In-market and pipeline drugs
Competitive Landscape:
This report also provides a detailed analysis of the current anovulation marketed drugs and late-stage pipeline drugs.

In-Market Drugs

Drug Overview
Mechanism of Action
Regulatory Status
Clinical Trial Results
Drug Uptake and Market Performance

Late-Stage Pipeline Drugs

Drug Overview
Mechanism of Action
Regulatory Status
Clinical Trial Results
Drug Uptake and Market Performance

*Kindly note that the drugs in the above table only represent a partial list of marketed/pipeline drugs, and the complete list has been provided in the report.

Key Questions Answered in this Report:
Market Insights

How has the anovulation market performed so far and how will it perform in the coming years?
What are the markets shares of various therapeutic segments in 2023 and how are they expected to perform till 2034?
What was the country-wise size of the anovulation market across the seven major markets in 2023 and what will it look like in 2034?
What is the growth rate of the anovulation market across the seven major markets and what will be the expected growth over the next ten years?
What are the key unmet needs in the market?

Epidemiology Insights

What is the number of prevalent cases (2018-2034) of anovulation across the seven major markets?
What is the number of prevalent cases (2018-2034) of anovulation by age across the seven major markets?
What is the number of prevalent cases (2018-2034) of anovulation by gender across the seven major markets?
How many patients are diagnosed (2018-2034) with anovulation across the seven major markets?
What is the size of the anovulation patient pool (2018-2023) across the seven major markets?
What would be the forecasted patient pool (2024-2034) across the seven major markets?
What are the key factors driving the epidemiological trend of anovulation?
What will be the growth rate of patients across the seven major markets?

Anovulation: Current Treatment Scenario, Marketed Drugs and Emerging Therapies

What are the current marketed drugs and what are their market performance?
What are the key pipeline drugs and how are they expected to perform in the coming years?
How safe are the current marketed drugs and what are their efficacies?
How safe are the late-stage pipeline drugs and what are their efficacies?
What are the current treatment guidelines for anovulation drugs across the seven major markets?

Who are the key companies in the market and what are their market shares?
What are the key mergers and acquisitions, licensing activities, collaborations, etc. related to the anovulation market?
What are the key regulatory events related to the anovulation market?
What is the structure of clinical trial landscape by status related to the anovulation market?
What is the structure of clinical trial landscape by phase related to the anovulation market?
What is the structure of clinical trial landscape by route of administration related to the anovulation market?
