Abstracts

The global anti-tuberculosis therapeutics market size reached US\$ 1,354.79 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1,991.34 Million by 2028, exhibiting a growth rate (CAGR) of 6.70% during 2023-2028. The rising healthcare spending, favorable reimbursement policies, technological advancements, and growing public-private partnerships represent some of the key factors driving the market.

Anti-tuberculosis therapeutics refer to the drugs and treatment strategies used to manage tuberculosis (TB), a bacterial infection caused by *Mycobacterium tuberculosis*. TB primarily affects the lungs and can also spread to other parts of the body, such as the kidneys, spine, and brain. Anti-tuberculosis therapeutics are used to eradicate the bacteria from the body and prevent the spread of the infection. This is achieved through a combination of antibiotics that are typically prescribed for six to nine months. Some of the most commonly used drugs include isoniazid, rifampin, ethambutol, and pyrazinamide. The exact combination of drugs used depends on the severity of the infection and the patient's health status. In addition, regular monitoring and follow-up are also essential to ensure treatment success and prevent the development of drug-resistant TB. In recent years, anti-tuberculosis therapeutics have gained traction as it also involves supportive care, such as oxygen therapy, nutrition support, and management of complications that may arise.

Anti-Tuberculosis Therapeutics Market Trends:

One of the primary factors driving the market is the high prevalence of tuberculosis (TB) worldwide, particularly in low- and middle-income countries. Additionally, the growing incidence of drug-resistant TB due to incomplete treatment, inadequate healthcare infrastructure, and lack of access to appropriate healthcare is positively influencing the market growth. Other than this, the development of new drugs and treatment strategies is also driving the anti-tuberculosis therapeutics market. In recent years, several new drugs, such as bedaquiline and delamanid, have been approved for the treatment of TB. These drugs offer improved efficacy and safety profiles compared to traditional TB drugs. In line with this, advancements in technology and diagnostics have enabled early detection and diagnosis of TB, leading to timely initiation of treatment and better patient outcomes, which represents another major growth-inducing factor. Furthermore, the increase in healthcare spending, particularly in emerging economies, has led to improved healthcare infrastructure and increased access to quality healthcare, including TB treatment. Apart from this, the growing awareness about TB and the importance of early diagnosis and treatment has also escalated the demand for anti-tuberculosis therapeutics. Moreover, government initiatives and funding for TB control programs have played a significant role in driving the anti-tuberculosis therapeutics market. For instance, governments and non-governmental organizations (NGOs) are working together to increase awareness, improve diagnosis, and ensure access to affordable and effective treatments, which is expected to drive market growth in the upcoming years.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the global anti-tuberculosis therapeutics market, along with forecasts at the global, regional, and country levels from 2023-2028. Our report has categorized the market based on the disease type, diagnosis and treatment, and end user.

Disease Type Insights:

Active TB

Latent TB

Others

The report has provided a detailed breakup and analysis of the anti-tuberculosis therapeutics market based on the disease type. This includes active TB, latent TB, and others.

The report has also provided a comprehensive analysis of all the major regional markets, which include North America (the United States and Canada); Europe (Germany, France, the United Kingdom, Italy, Spain, Russia, and others); Asia Pacific (China, Japan, India, South Korea, Australia, Indonesia, and others); Latin America (Brazil, Mexico, and others); and the Middle East and Africa. According to the report, North America was the largest market for anti-tuberculosis therapeutics. Some of the factors driving the North America anti-tuberculosis therapeutics market included rising prevalence of tuberculosis, growing drug resistance, and numerous government initiatives.

Competitive Landscape:

The report has also provided a comprehensive analysis of the competitive landscape in the global anti-tuberculosis therapeutics market. Competitive analysis such as market structure, market share by key players, player positioning, top winning strategies, competitive dashboard, and company evaluation quadrant has been covered in the report. Also, detailed profiles of all major companies have been provided. Some of the

companies covered include F Hoffmann-La Roche Ltd., Lannett Company Inc., Lupin Limited, Macleods Pharmaceuticals Limited, Otsuka Pharmaceutical Co. Ltd., etc. Kindly note that this only represents a partial list of companies, and the complete list has been provided in the report.

Key Questions Answered in This Report:

How has the global anti-tuberculosis therapeutics market performed so far, and how will it perform in the coming years?

What are the drivers, restraints, and opportunities in the global anti-tuberculosis therapeutics market?

What is the impact of each driver, restraint, and opportunity on the global anti-tuberculosis therapeutics market?

What are the key regional markets?

Which countries represent the most attractive anti-tuberculosis therapeutics market?

What is the breakup of the market based on the disease type?

Which is the most attractive disease type in the anti-tuberculosis therapeutics market?

What is the breakup of the market based on the diagnosis and treatment?

Which is the most attractive diagnosis and treatment in the anti-tuberculosis therapeutics market?

What is the breakup of the market based on end user?

Which is the most attractive end user in the anti-tuberculosis therapeutics market?

What is the competitive structure of the global anti-tuberculosis therapeutics market?

Who are the key players/companies in the global anti-tuberculosis therapeutics market?
