The 7 major Asherman's syndrome markets reached a value of US\$ 182.8 Million in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 315.0 Million by 2034, exhibiting a growth rate (CAGR) of 5.07% during 2024-2034.

The Asherman's syndrome market has been comprehensively analyzed in IMARC's new report titled "Asherman's Syndrome Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Asherman's syndrome, also known as intrauterine adhesions or uterine synechiae, is a rare gynecological condition characterized by the development of scar tissue inside the uterus. This scarring can lead to the walls of the uterus sticking together and may result in various reproductive issues. Some of the common symptoms associated with the condition include menstrual irregularities, such as reduced menstrual flow or absence of menstruation (amenorrhea), recurrent pregnancy loss, infertility, etc. The presence of adhesions can obstruct the uterine cavity, affecting the implantation of embryos and lowering the chances of successful pregnancies. Some patients may also experience pelvic pain. The diagnosis of Asherman's syndrome involves a comprehensive evaluation by a healthcare professional with expertise in reproductive health and gynecology. The gold standard for diagnosis is hysteroscopy, a minimally invasive procedure in which a thin, lighted camera (hysteroscope) is inserted through the vagina and cervix to visualize the uterine cavity directly. Additionally, several imaging modalities, such as transvaginal ultrasonography, saline infusion sonohysterography (SIS), hysterosalpingography (HSG), magnetic resonance imaging (MRI), etc., may be performed to visualize the uterine cavity and identify any intrauterine adhesions or abnormalities.

The increasing utilization of dilation and curettage procedures, which can result in injury

to the endometrial lining, thereby leading to scar tissue formation and adhesions, is primarily driving the Asherman's syndrome market. In addition to this, the inflating incidences of numerous associated risk factors, including uterine infections like postpartum infections or pelvic inflammatory disease (PID), myomectomy, uterine rupture during childbirth, chronic endometritis, cesarean section deliveries, etc., are also creating a positive outlook for the market. Moreover, the widespread adoption of hormonal therapy to promote endometrial regeneration and reduce the risk of adhesion recurrence is further bolstering the market growth. Apart from this, the escalating application of hysteroscopic adhesiolysis, since it aids in restoring normal uterine anatomy, leading to improved menstrual function and increased chances of conception, is acting as another significant growth-inducing factor. Additionally, the ongoing advancements in the field of diagnostics, such as the introduction of transvaginal ultrasonography that allows visualization of the uterine cavity and the detection of intrauterine adhesions or irregularities in the endometrial lining, are expected to drive the Asherman's syndrome market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the Asherman's syndrome market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for Asherman's syndrome and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the Asherman's syndrome market in any manner.
