Abstracts

The global asset performance management market size reached US\$ 22.5 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 54.5 Billion by 2032, exhibiting a growth rate (CAGR) of 10.1% during 2024-2032.

Asset performance management (APM) relies on pattern recognition, artificial intelligence (AI), machine learning (ML), and data capture, integration, visualization and analytics for improving the reliability and availability of physical assets. It assists in reducing unplanned downtime, maintenance costs, the total cost of ownership (TCO) for assets, plants, and environment, health, and safety (EH&S) threats. It also helps optimize asset performance, increase return on assets (ROA), and improve visibility of operations. As a result, APM finds extensive applications in the manufacturing, healthcare, information technology (IT), and telecommunications industries around the world.

Asset Performance Management Market Trends:

The rising digital transformation of different industry verticals presently represents one

of the key factors propelling the growth of the market. Besides this, businesses operating in the food and beverage (F&B) industry face numerous challenges in executing different production processes, maintaining various systems and equipment, and managing the supply chain, prices, and availability of incoming raw materials. Consequently, APM solutions are increasingly being utilized as they aid in empowering the workforce and improving the overall equipment effectiveness (OEE). Moreover, these solutions enable businesses to evaluate financial risks and reward different asset investment and management strategies. In addition, APM solutions help assure that assets have the required capability for optimal operating performance to meet the dynamic business and production goals. These product benefits are strengthening the growth of the market. Apart from this, numerous asset-intensive businesses, particularly in the chemical, mining, oil and gas, and power and utility industries, are employing industrial internet of things (IIoT) and cognitive technologies to help enhance equipment reliability. This is offering lucrative growth opportunities to leading players operating in the industry.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global asset performance management market report, along with forecasts at the global, regional and country levels from 2024-2032. Our report has categorized the market based on component, deployment mode, organization size and industry vertical.

Breakup by Component:

Solution
Service

Breakup by Deployment Mode:

On-premises
Cloud-based

Breakup by Organization Size:

Large Enterprises
Small and Medium-sized Enterprises

Breakup by Industry Vertical:

Energy and Utilities
Oil and Gas
Manufacturing
Mining and Metals
Healthcare and Life Sciences
