### Market Overview 2023-2028:

The global asthma therapeutics market size reached US\$ 18.1 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 20.6 Billion by 2028, exhibiting a growth rate (CAGR) of 2.34% during 2023-2028.

Asthma therapeutics refer to various pharmaceutical drugs that are used for the treatment of asthma. Asthma is usually triggered by indoor and outdoor causative agents, including pollution, allergens and dust. These therapeutics are usually bronchodilators and anti-inflammatory drugs, which include corticosteroids, long-acting beta-agonists (LABA), methylxanthine, immunomodulators and leukotriene modifiers. A number of combination therapy drugs are also used that can be inhaled, injected, or orally administered. These drugs expand the passageway into the lungs and enable the movement of air to improve breathing. They also aid in clearing mucus from the lungs that gets coughed out with ease.

### Asthma Therapeutics Market Trends:

The increasing prevalence of asthma and other respiratory disorders, along with improvements in the diagnostic technologies, is one of the key factors driving the growth of the market. Furthermore, rising awareness among the masses regarding the availability of effective asthma therapeutics is also providing driving the market growth. For instance, asthmatic patients are primarily treated with inhaled corticosteroids and patients with advanced conditions or persistent asthma are treated with target-specific drugs. There is also an extensive demand for monoclonal antibodies (mAbs) that block

immunoglobulin E and specific cytokines. The development of combination therapies for the treatment of respiratory diseases is acting as another growth-inducing factor. Increasing healthcare expenditures, extensive research, and development (R&D) activities in the field of medical sciences and improvements in the healthcare infrastructure are some of the other factors that are expected to drive the market further.
