Abstracts

The global baby feeding bottles market size reached US\$ 2.9 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 3.8 Billion by 2028, exhibiting a growth rate (CAGR) of 4.61% during 2022-2028.

Baby feeding bottles, or nursing bottles, are childcare products used for feeding infants and young children. The bottles consist of a rubber teat to assist the baby in consuming milk, water, infant formula and other liquids. They are manufactured using plastic, silicone, glass and stainless-steel materials and are available in varying capacities. They are highly convenient for infants to drink liquids from and toddlers once they stop breastfeeding. Baby feeding bottles enable the parents to monitor the food intake of the child with enhanced flexibility.

Baby Feeding Bottles Market Trends:

The increasing prevalence of lactose intolerance among infants across the globe is one of the key factors driving the market growth. Moreover, rising female workforce participation and the shifting consumer preference toward infant formula are providing a thrust to the market growth. Infant and baby food manufacturers are developing products with high nutritional content and appealing flavor profiles. These products substitute breastfeeding and enable the parents to meet the nutritional requirements of the child. Additionally, various product innovations, such as the launch of bisphenol (BP) A-free and stainless-steel baby feeding bottles, are acting as other growth-inducing factors. Product manufacturers are also developing premium-quality medical-grade silicone feeding bottles with offset nipples to promote latching and minimize bottle rejection. Novel variants also contain a dual venting system to reduce colic and facilitate proper airflow. In line with this, aggressive promotional activities by manufacturers

through celebrity endorsements and marketing campaigns on social media and e-commerce platforms are also contributing to the market growth. Other factors, including rising expenditure capacities of the consumers, along with the increasing birth rate across the globe, are anticipated to drive the market toward growth.
