The Bahrain PVC pipes market size reached 98.4 Kilo Tons in 2022. Looking forward, IMARC Group expects the market to reach 118.8 Kilo Tons by 2028, exhibiting a growth rate (CAGR) of 3% during 2023-2028.

PVC pipes are made up of polyvinyl chloride (PVC), a chemical polymer resin. These pipes are made from a blend of PVC and other additives. PVC pipes have numerous applications in drain waste vent, water service lines, irrigation, sewers and other industrial installations. The PVC pipes are used extensively in electric systems due to its properties of heat and electrical insulation. Apart from that, these pipes have high resistance to chemicals and a high tensile strength to withstand very high fluid pressure, so they are widely used in long distance water supply and underground sewerage systems. They are strong and can withstand extreme movements, so can be used in earthquake prone areas without experiencing any damage. These pipes are also cost-effective, light-weight and long-lasting, which makes it widely acceptable over its competing piping materials. The PVC pipes are rapidly replacing the concrete and metal pipes as they can be used in cases of energy, gas, conduit, and other industrial applications too. The rapid economic growth in Bahrain is pushing the demand for better infrastructure thereby boosting the demand for PVC pipes in the region.

In Bahrain, the government is focusing on improving the country's infrastructure and is undertaking various construction projects. This is a key factor that will drive the market in this region. Also, the housing supply in Bahrain is too less as compared to the demand for housing, especially among the low and mid-income groups, hence there is a scope for increase in residential property development and this will provide a thrust to the PVC pipes market. Furthermore, the heightened awareness of consumers on the smaller environmental footprint of PVC pipes as compared to the other piping materials

is expected to influence the market's growth in this region.
