Abstracts

The global battery charger market size reached US\$ 25.8 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 38.6 Billion by 2032, exhibiting a growth rate (CAGR) of 4.5% during 2024-2032.

A battery charger is a device which is used for transferring energy into a rechargeable battery by passing an electric current through it. Some battery chargers need to be manually disconnected by the constant voltage source whereas others may use a timer for cutting off the power at fixed intervals. Currently, the expansion of the electronics industry is the primary factor catalysing the demand for battery chargers. An increasing demand for electrical vehicles(EVs) and connected devices acts as another major force stimulating the growth of the battery charger market.

Over the years, several trends have been observed in the market like miniaturisation which have made these chargers powerful and faster, yet increasingly compact in size. In addition, various developments have been made so that battery chargers can cater to different functions without the need for separate cables. Growing focus and awareness regarding the importance of charging management is further encouraging the manufacturers to develop safe and rapid charging technologies. Apart from this, in order to expand their consumer-base, manufacturers have introduced wireless, smart and high temperature-resistant battery chargers.
