## Abstracts

The global bespoke units market reached a value of US\$ 217.33 Million in 2021. Looking forward, IMARC Group expects the market to reach a value of US\$ 332.42 Million by 2027, exhibiting a CAGR of 7.10% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

Bespoke units refer to custom-made equipment modified as per the requirement of the user. It includes various machineries and furniture used in office spaces, salons, bathrooms, home offices, commercial kitchens, restaurants, hotels and canteens. The customizations are made to alter the color, dimensions and detailing of the products to increase their aesthetic appeal and provide superior functionality and ergonomics to the user. Bespoke units are uniquely designed for each individual and do not have standardized sizing. They also offer various other benefits, such as the availability of a wide variety of design alternatives and modifications, premium-quality raw materials with long operational life and user-specific functionalities.

### Bespoke Units Market Trends:

Significant growth in the construction industry across the globe is one of the key factors creating a positive outlook for the market. Moreover, the increasing demand for customized furniture and fittings in luxury hotels and fine-dine restaurants is providing a thrust to the growth of the market. This can be attributed to the extensive diversification in culinary activities, which is leading to the increasing adoption of different types of cooking and food processing equipment. In line with this, the widespread adoption of large canteens and cafes with open kitchen facilities has led to the increasing demand for furniture and culinary equipment with ergonomic designs for improved theme-based

aesthetics and operational efficiency. Additionally, the launch of wardrobes, television media units and bedrooms with innovative sliding doors and custom designs is acting as another growth-inducing factor. These units are integrated with the Internet of Things (IoT) and artificial intelligence (AI) functionalities that can be controlled and operated remotely through smartphone applications. Other factors, including the rising expenditure capacities of the consumers, along with rapid urbanization, especially in the emerging economies, are anticipated to drive the market toward growth.
