Abstracts

The global bifold doors market size reached US\$ 10.0 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 13.4 Billion by 2028, exhibiting a growth rate (CAGR) of 4.62% during 2023-2028.

Bifold doors are foldable doors that open and close by sliding and folding in sections. They consist of a series of panels with multiple locking points and can be installed in gateways, patios and indoor and outdoor spaces. They are commonly available in room divider, closet door, raised panel door and flat panel door variants that are used for covering small spaces, such as pantries, wardrobes, laundry rooms and gardens. Bifold doors are manufactured using durable materials, such as wood, glass, vinyl, fiberglass, unplasticized polyvinyl chloride (uPVC) and aluminum. They offer natural insulation and enhanced durability, customizability and sound absorption. Bifold doors also have minimal maintenance requirements and are cost-effective and environmentally friendly. As a result, they are widely used for residential, commercial and industrial applications.

Bifold Doors Market Trends:

Significant growth in the construction industry across the globe is one of the key factors creating a positive outlook for the market. There is a rising requirement for efficient doors that offer high insulation and heat retention in houses and offices, which is leading to the widespread adoption of bifold doors. Moreover, the increasing consumer preference for modernized interior designs and extensive investments in home remodeling and renovation activities are providing a thrust to the market growth. Additionally, various product innovations, such as the launch of bifold doors in aesthetically appealing designs with high-gloss finishing, are acting as other growth-inducing factors. These premium quality bifold doors are customized as per the requirements of the consumer and are widely used in hotels and restaurants to enhance

the overall ambiance of the enclosed space. Other factors, including rapid urbanization and increasing expenditure capacities of the consumers, along with extensive infrastructural development, especially in the developing economies, are anticipated to drive the market toward growth.
