## **Abstracts**

The global boiler insurance market size reached US\$ 10.3 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 22.6 Billion by 2028, exhibiting a growth rate (CAGR) of 14.0% during 2022-2028.

Boiler insurance refers to a type of insurance designed to cover the damages and losses caused by explosions inside or outside the boiler. A boiler is a steel pressure vessel in which fluids are heated at extremely high temperatures to generate steam or vapor. The vapors exit the boiler for use in various processes or heating applications, including water heating, central heating, boiler-based power generation, cooking and sanitation. The insurance provides coverage for the physical damages and financial loss incurred by repairing or replacing the damaged equipment after the breakdown. The insurance also covers the cost of replacing perishable goods, which are spoiled due to the failed equipment.

**Boiler Insurance Market Trends:**

Rapid digitization in the insurance sector, along with increasing requirement for reducing the maintenance and repairing costs associated with boilers and other equipment, is one of the key factors driving the growth of the market. Moreover, small and medium-sized enterprises are expanding their businesses and relying more on third-party liability coverage solutions to mitigate their risks and losses, which is providing a thrust to the market growth. Insurance providers are introducing novel strategies and policies to increase revenue and enhance the overall customer experience. Additionally, various technological advancements, such as the integration of connected devices with voice-enabled troubleshooting services, are acting as other growth-inducing factors. These novel solutions enable the consumers to use advanced artificial intelligence (AI)-based services to connect directly with the organization and seek redressal in real-time. Other factors, including rapid industrialization, along with the advent of insurance

policies with cost-effective premium rates, are acting as other growth-inducing factors.
