Abstracts

The 7 major bronchiolitis obliterans syndrome markets reached a value of US\$ 60.5 Million in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 94.0 Million by 2034, exhibiting a growth rate (CAGR) of 4.09% during 2024-2034.

The bronchiolitis obliterans syndrome market has been comprehensively analyzed in IMARC's new report titled "Bronchiolitis Obliterans Syndrome Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Bronchiolitis obliterans syndrome (BOS) is a progressive lung disease that causes inflammation and scarring of the small airways in the lungs. This scarring, or fibrosis, can cause the airways to become narrow, leading to breathing difficulties and decreased oxygen exchange in the lungs. The primary symptoms associated with this disease include shortness of breath and dry cough. Some individuals may also experience wheezing, fatigue, night sweats, skin rashes, etc. As the disease progresses, the indications may become more severe and can impact daily activities. The diagnosis of BOS is primarily based on clinical symptoms, pulmonary function tests, and imaging studies. Pulmonary function tests, such as spirometry, can assist in determining the severity of the disease by measuring how well the lungs are functioning. Several imaging studies, including chest X-rays or CT scans, can help identify any structural changes in the lungs. Additional tests, such as bronchoscopy and biopsy, may also be performed to aid in confirming the diagnosis and rule out other possible causes of respiratory symptoms.

The increasing incidence of several associated risk factors, such as lung transplantation, respiratory tract infections, connective tissue disorders, exposure to toxins, etc., is primarily driving the bronchiolitis obliterans syndrome market. In addition

to this, the escalating usage of effective medications, including bronchodilators, corticosteroids, calcineurin inhibitors, cytotoxic agents, etc., to improve lung function and reduce symptoms of the ailment is augmenting the market growth. Furthermore, the widespread adoption of pulmonary scintigraphy, which utilizes radioisotopes to detect airway and parenchymal abnormalities, for diagnosing the condition is also creating a positive outlook for the market. Besides this, the rising utilization of non-invasive ventilation, which involves providing mechanical support to the lungs via a mask or nasal prongs without the need for invasive procedures like intubation, is further bolstering the market growth. Additionally, numerous key players are making extensive investments in developing new pharmacological agents for treating the ailment, such as drugs that target specific immune pathways. This, in turn, is acting as another significant growth-inducing factor. Furthermore, the emerging popularity of liposomal drug inhalation therapy over traditional systemic drug administration technology owing to its several associated benefits, including increased drug delivery to the lungs and reduced systemic side effects, is expected to drive the bronchiolitis obliterans syndrome market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the bronchiolitis obliterans syndrome market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for bronchiolitis obliterans syndrome and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the bronchiolitis obliterans syndrome market in any manner.
