Abstracts

The 7 major bulimia nervosa markets reached a value of US\$ 369.3 Million in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 606.1 Million by 2034, exhibiting a growth rate (CAGR) of 4.61% during 2024-2034.

The bulimia nervosa market has been comprehensively analyzed in IMARC's new report titled "Bulimia Nervosa Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Bulimia nervosa is an eating disorder characterized by recurrent binge eating episodes followed by compensatory behaviors such as self-induced vomiting, laxative use, or excessive exercise. Individuals who suffer from the condition often have a preoccupation with food and body image, experience feelings of guilt and shame, and may engage in secretive behavior related to their eating habits. Various other common symptoms include fluctuations in weight, dental problems, gastrointestinal issues, mood disturbances, etc. If left untreated, bulimia nervosa can have severe physical and mental health consequences, such as electrolyte imbalances, dehydration, malnutrition, increased risk of suicidal ideation, etc. The diagnosis of the ailment involves a comprehensive evaluation that takes into account the individual's medical history, physical indications, and psychological indications. Various medical exams and laboratory tests are ordered to assess the patient's overall health and rule out further conditions that could be causing the symptoms. Several psychological evaluations may include interviews, questionnaires, and other assessments to examine the individual's eating behaviors, body image, and mental health.

The increasing cases of abnormalities in brain chemistry or neurotransmitter systems, such as the serotonin system, are primarily driving the bulimia nervosa market. In

In addition to this, the rising incidences of several associated risk factors, including traumatic life events; psychological issues like poor body image, low self-esteem, and a tendency towards perfectionism; cultural pressure to be thin, etc., are also bolstering the market growth. Furthermore, the widespread adoption of antidepressant medications, such as selective serotonin reuptake inhibitors (SSRIs), for reducing the symptoms of depression and anxiety that often accompany the ailment is acting as another significant growth-inducing factor. Additionally, the increasing utilization of nutritional counseling to help individuals establish a healthy and balanced diet, as well as address any nutritional deficiencies that may have resulted from purging behaviors, is further augmenting the market growth. Moreover, the escalating demand for dialectical behavior therapy (DBT) on account of its several associated benefits, such as improved interpersonal relationships and reduced impulsive behaviors, is also creating a positive outlook for the market. Apart from this, the emerging popularity of mindfulness-based interventions, since they aid in lowering stress, improving emotional regulation, and promoting self-compassion and acceptance, is expected to drive the bulimia nervosa market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the bulimia nervosa market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for bulimia nervosa and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the bulimia nervosa market in any manner.
