## Abstracts

The global business jet market size reached US\$ 18.4 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 23.7 Billion by 2028, exhibiting a growth rate (CAGR) of 4.3% during 2023-2028.

A business jet refers to an aircraft that is specifically designed for private air travel for a small group of passengers. Some of the common types of business jets include single-pilot airplanes, propeller-driven jets, turbine aircraft and piston jets. These jets are primarily used by individuals as well as private and government organizations for leisure travel, business tours, short-haul flights and VVIP transport. They can also be customized for other applications, such as evacuation during emergencies, express parcel deliveries and transporting goods for the armed forces.

Significant growth in the aviation industry is one of the key factors driving the growth of the market. Furthermore, the growing preference for long-range jets for travel and tourism activities is also providing a boost to the market growth. Business jets minimize travel time, offer the facility of on-demand flight scheduling and provide ample privacy to the passengers to conduct their business while flying. Various advancements, including the integration of innovative connectivity solutions, avionics, interiors and more efficient engines in the jets, are acting as another growth-inducing factor. Original equipment manufacturers (OEMs) are replacing mechanical flight systems with lightweight virtual windows, video calling systems and inflight entertainment systems that aid in enhancing the comfort and overall travel experience for the passengers. In line with this, the introduction of Electric Vertical Take-off and Landing (eVTOL) aircraft that has superior urban air mobility is creating a positive impact on the market growth. Other factors, including the development of vertiports and the introduction of consumer-centric business models and membership programs, are projected to drive the market further.
