## Market Overview:

The global cancer vaccines market size reached US\$ 6.1 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 12.1 Billion by 2028, exhibiting a growth rate (CAGR) of 11.61% during 2023-2028.

Cancer is a malignant tumor caused by the uncontrollable growth of abnormal cells in the body. It can be treated through the use of various medications and vaccines. Between these, vaccines are broadly categorized into preventive and therapeutic. Preventive cancer vaccines are deployed for eliminating cancer caused by oncovirus and protecting from human papillomavirus (HPV), whereas therapeutic vaccines aid in stimulating the individual adaptive immune systems by using tumor antigens. At present, cancer vaccines are commercially available in varying types, such as antigen, dendritic cell, and anti-idiotype.

#### **Cancer Vaccines Market Trends:**

The increasing prevalence of cancer, especially due to the rising consumption of tobacco-based products and evolving lifestyles is currently driving the cancer vaccines market growth. In line with this, favorable initiatives undertaken by the government bodies of several nations for introducing novel cancer vaccines, along with extensive fundings in the field of viral recombinant cancer vaccines are further facilitating the widespread adoption of these vaccines in the healthcare sector. In line with this, the extensive utilization of United States Food and Drug Administration (US FDA) approved vaccines, including human papillomavirus vaccine (HPV) and hepatitis B vaccine (HBV) to reduce the risk of certain types of cancer, such as liver cancer, is contributing to the

market growth. The market is also significantly driven by rapid technological advancements focusing on the development of effective and specific cancer treatments. Other factors, such as improving healthcare infrastructure, rising geriatric population, who are susceptible to various chronic ailments, including cancer, and growing consumer awareness regarding the symptoms and the available treatment options, are creating a positive outlook for the market further across the globe.

# Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global cancer vaccines market report, along with forecasts at the global, regional and country level from 2023-2028. Our report has categorized the market based on type, technology, indication and end user.
