Abstracts

The global canine atopic dermatitis market size reached US\$ 1.56 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 3.89 Billion by 2027, exhibiting a growth rate (CAGR) of 16.4% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic. These insights are included in the report as a major market contributor.

Canine atopic dermatitis (CAD) is an allergic skin disease in dogs caused by allergens, such as pollens, house dust, insect bites, grass and food ingredients. It is an inherited predisposition that generally affects dogs aged between six months to three years. It commonly affects the ventral abdomen, mouth, eyes, interdigital skin, ear pinnae, carpal, elbow and perineal area of the animals. CAD is characterized by various symptoms, such as excessive scratching, inflammation and itching around paws, underarms and face. It can be treated by immuno-suppressants, monoclonal antibody and glucocorticoids. They can be administered through oral, injectables and topical medications. It is known to be highly prevalent in German shepherds, Labradors, golden retrievers and pugs.

Canine Atopic Dermatitis Market Trends:

The increasing occurrence of CAD in domesticated dogs across the globe is one of the key factors creating a positive outlook for the market. This can be attributed to the changing environmental conditions, rising air pollution levels and prolonged exposure to allergens. Moreover, the increasing concerns and rising awareness among pet owners regarding early symptoms and signs of CAD, such as redness, greasy skin and yeasty smell, are providing a thrust to the market growth. Additionally, the widespread adoption

of monoclonal antibodies for the treatment of the disease is favoring the market growth. These antibodies aid in directing the required immune response and calming the spread of the disease. In line with this, the increasing number of veterinary practitioners, hospitals and clinics dedicated to providing improved care for animals is positively impacting the market growth. Other factors, including the implementation of various government initiatives to restrict the usage of off-label human drugs on animals, along with extensive research and development (R&D) in the field of veterinary sciences, are anticipated to drive the market toward growth.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global canine atopic dermatitis market report, along with forecasts at the global, regional and country level from 2022-2027. Our report has categorized the market based on drug class type, route of administration and distribution channel.

Breakup by Drug Class Type:

- Glucocorticoids
- Immunosuppressants
- Monoclonal Antibody
- Others

Breakup by Route of Administration:

- Topical
- Oral
- Injectable

Breakup by Distribution Channel:

- Veterinary Hospitals
- Pet Clinics
- Pharmacies and Drugstores
- Others

Breakup by Region:

- North America
- United States

Canada
Asia-Pacific
China
Japan
India
South Korea
Australia
Indonesia
Others
Europe
Germany
France
United Kingdom
Italy
Spain
Russia
Others
