## Abstracts

### Market Overview:

The global car sharing market size reached US\$ 7.0 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 15.4 Billion by 2028, exhibiting a growth rate (CAGR) of 13.4% during 2023-2028.

Carsharing refers to a car rental service wherein individuals rent cars for a short time. It supports community transit, helps achieve environmental goals, decreases personal car ownership, reduces total distance traveled by the vehicle, improves urban land use and development, and provides affordable access to vehicles. At present, the rising need for cost-effective and convenient mobility services, in confluence with advancements in technology that facilitate simplified access to shared mobility platforms, is positively influencing the demand for carsharing.

There is a significant rise in the demand for carsharing services on account of the rising greenhouse emissions, growing environmental concerns and the increasing adoption of novel mobility solutions. As a result, governments of numerous countries are undertaking initiatives and conducting awareness campaigns to curb emissions and reduce the ownership of private vehicles. Consequently, carsharing services have emerged as an effective solution. Apart from this, the market growth can also be accredited to the expanding share of peer-to-peer (P2P) lending services, which allow private car owners to rent personal cars. Furthermore, various organizations are relying on corporate carsharing as it enables employees to stay punctual, reduces fleet management costs of the company and eliminates the requirement for large parking spaces.
