Abstracts

The global chemical protective clothing market size reached US\$ 1.3 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 1.9 Billion by 2027, exhibiting a growth rate (CAGR) of 6.3% during 2022-2027.

Chemical protective clothing refers to the personal protective equipment that is used to shield or isolate wearers from various chemical, biological, thermal, nuclear and radiation hazards. Some of the commonly used chemical protective clothing include helmets, high visibility vests, eye protectors, facemasks, gloves, safety boots, steel toe caps and respiratory aids. It also consists of various single-use clothing, reusable industrial workwear and fire protective gear that are fortified with additional protective layers to minimize the exposure to invisible and toxic chemicals. Owing to this, these clothes find extensive applications across various industries, including oil and gas, construction, mining, manufacturing and defense.

Rapid industrialization across the globe is one of the key factors driving the growth of the market. Furthermore, increasing awareness regarding the importance of workplace safety, coupled with the rising product adoption across various industry verticals, is also providing a boost to the market growth. This can be attributed to the blends of aramid, polyolefin, polybenzimidazole, cotton fibers and laminated polyesters, which are used in the manufacturing of these clothes and have properties, such as inherent non-flammability, high durability and resistance to chemicals and heat. Various product innovations, such as the development of nanotechnology-based materials that are light in weight and offer superior protection against various hazards, are acting as another major growth-inducing factor. Apart from this, the rising deployment of chemical compounds in biological weapons is also resulting in the increasing utilization of these

products in the defense and military sector. Other factors, including extensive research and development (R&D) activities, along with significant growth in the construction and manufacturing sectors, are projected to drive the market in the upcoming years.
