Abstracts

The global cholera vaccines market size reached US\$ 4.9 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 9.2 Million by 2028, exhibiting a growth rate (CAGR) of 11.1% during 2023-2028.

Cholera is an intestinal disease caused by bacterial infections that spread through contaminated food and water. It leads to severe diarrhea, dehydration, abdominal pain, fever, rapid heart rate, loss of skin elasticity, low blood pressure, muscle cramps, and dry mucous membranes, such as the inside of the mouth, throat, nose, and eyelids. It is presently a global threat to public health, which can be prevented through the vaccine. The cholera vaccine exposes a small dose of live cholera bacteria in the body that helps develop immunity against the disease. It can be given orally or injected intradermally or intramuscularly in the body.

Cholera Vaccines Market Trends:

The growing prevalence of cholera on account of poor hygiene and sanitation represents one of the major factors driving the market. In addition, there is a rise in the use of contaminated water for agriculture and olericulture across the globe. This, along with the increasing consumption of street and fast food due to the hectic lifestyles of individuals, is propelling the growth of the market. Moreover, there is a considerable rise in water pollution on account of sewage and factory wastes getting discharged into lakes and rivers. As a result, people are consuming contaminated seafood worldwide, which, in turn, is resulting in the spread of cholera. Additionally, rising awareness about cholera through initiatives of non-governmental organizations (NGOs), along with numerous immunization programs introduced by governments of several countries to reduce vaccine-preventable diseases, is positively influencing the market. Furthermore,

key market players are extensively investing in research and development (R&D) activities to provide more efficient and cost-effective cholera vaccines, which is projected to propel the growth of the market.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global cholera vaccines market report, along with forecasts at the global, regional and country level from 2023-2028. Our report has categorized the market based on vaccine type, product and end user.

Breakup by Vaccine Type:

Whole Cell V. Cholerae O1 with Recombinant B-Subunit Killed Oral O1 and O139

Breakup by Product:

Dukoral

Shanchol

Vaxchora

Euvichol and Euvichol-Plus

Competitive Landscape:

The competitive landscape of the industry has also been examined along with the profiles of the key players being Astellas Pharma Inc., Celldex Therapeutics Inc. (Avant Immunotherapeutics Inc.), Emergent BioSolutions Inc., Eubiologics Co. Ltd., Johnson & Johnson, Merck & Co. Inc, Pfizer Inc., PharmaChoice Canada Inc, Sanofi S.A., Takeda Pharmaceutical Company Limited and Valneva SE.

Key Questions Answered in This Report:

How has the global cholera vaccines market performed so far and how will it perform in the coming years?

What has been the impact of COVID-19 on the global cholera vaccines market?

What are the key regional markets?

What is the breakup of the market based on the vaccine type?

What is the breakup of the market based on the product?

What is the breakup of the market based on the end user?

What are the various stages in the value chain of the industry?

What are the key driving factors and challenges in the industry?

What is the structure of the global cholera vaccines market and who are the key players?

What is the degree of competition in the industry?
