The global cognitive computing market reached a value of US\$ 25.30 Billion in 2021. Looking forward, IMARC Group expects the market to reach a value of US\$ 110.66 Billion by 2027, exhibiting a CAGR of 25.70% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use industries. These insights are included in the report as a major market contributor.

Cognitive computing (CC) relies on artificial intelligence (AI), machine learning (ML), natural language understanding (NLU), speech and image recognition, conversant human interface, and distributed and high-performance computing. It offers improved data collection and interpretation, troubleshooting and error detection, and enhanced customer retention to businesses. It also assists in informed and strategic decision-making, smart financial decisions, improving efficiency, and increasing cost savings. As a result, CC finds extensive applications in numerous industry verticals, such as retail, telecommunications, and banking, financial services and insurance (BFSI).

Cognitive Computing Market Trends:

The rising adoption of cutting-edge technologies in small and medium-sized enterprises (SMEs) across the globe represents one of the key factors impelling the growth of the market. Moreover, CC solutions are employed in the healthcare industry as they aid medical professionals in disease diagnosis by processing enormous data rapidly and generating customized smart recommendations. These solutions also aid in providing a better course of treatment for patients. Apart from this, they help improve the delivery of personalized health intervention programs, including lifestyle/behavioral change management. Besides this, they are increasingly being used in delivering actionable

sporting tips to athletes during a game or competition and advising investment strategists on leveraging information to make decisions while buying or selling in a marketplace. In addition, they can be utilized in assessing risks in real-time, producing accurate results, and understanding human language to interact with customers and workers. CC solutions are also useful in mining structured and unstructured data and offering hypotheses and explanations for consideration by humans. This, coupled with the thriving information technology (IT) industry, is projected to drive the market in the coming years.
