## Abstracts

The global construction chemicals market size reached US\$ 41.7 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 66.8 Billion by 2032, exhibiting a growth rate (CAGR) of 5.3% during 2024-2032.

Construction chemicals are specialized chemical compounds added to modify the properties of various construction materials. They are mixed with concrete, mortar, cement and other materials to enhance their existing properties and hold the construction together. Some commonly used construction chemicals include concrete admixtures, adhesives, sealants, protective coatings, asphalt modifiers and waterproofing agents. They are manufactured using natural and synthetic resins, waxes and solvents and are available in oil-, resin-, water- and organic chemical-based variants. They enhance moisture retention, heat reflectance, sound insulation, tensile, flexural and bond strength and resistance to mold, chlorides and salts. As a result, they are widely used in the construction of residential, commercial and infrastructural buildings.

Construction Chemicals Market Trends:

Significant growth in the construction industry across the globe is one of the key factors creating a positive outlook for the market. Moreover, the widespread adoption of ready-to-mix concrete (RMC) for various building and non-building constructions, such as roads, bridges, tunnels and dams, is providing a thrust to the growth of the market. Construction contractors are widely using concrete admixtures to improve the properties

of hardened concrete and ensure improved output during mixing, transporting, placing and curing. Admixes minimize shrinkage, alkali-silica reactivity and enhance corrosion inhibition, bonding, coloring and damp proofing. In line with this, the increasing repair and refurbishment activities are also contributing to the market growth. Additionally, various product innovations, such as the development of green cement manufactured using sustainable materials, are favoring the growth of the market. Other factors, including rising expenditure capacities of the masses, along with the implementation of favorable government policies promoting infrastructural development, are anticipated to drive the market toward growth.
