Abstracts

The global corn starch market size reached 84.2 Million Tons in 2022. Looking forward, IMARC Group expects the market to reach 98.2 Million Tons by 2028, exhibiting a growth rate (CAGR) of 2.65% during 2023-2028.

Corn starch is a white, tasteless and odorless powder extracted from the white endosperm present in the middle of a corn kernel. It is gluten-free and considered an excellent alternative to flour thickeners in marinade, stew, sauce, gravy, glaze and soup recipes. It is widely utilized in the food and beverage (F&B) industry to coat fruits in pies, tarts and other desserts to add texture. It also finds applications in coating paper, producing boxboard and insulating material board. Other than this, it is employed in the pharmaceutical industry as a disintegrant and binder in tablets, emulsions and ointments.

Corn Starch Market Trends:

A significant rise in the utilization of corn starch as a thickening agent in various cuisines, along with the escalating demand for processed food products, represents one of the key factors bolstering the market growth. It is also utilized as an anti-caking agent wherein a thin layer of cornstarch is dusted to prevent shredded cheese from clumping in the package. Furthermore, it finds extensive applications in the textile industry to provide stiffness and add weight to clothes. It is also applied as an absorbent in several cosmetic products around the world. Apart from this, compostable and thermal insulation made using cornstarch-based foam is considered ideal for shipping temperature-sensitive products. Apart from this, with rising environmental concerns, bioplastics derived from corn starch are gaining traction over fossil fuel plastics. This, in confluence with the rising demand for oral pharmaceutical products on account of the growing prevalence of diseases and increasing access to healthcare facilities, is

anticipated to drive the market in the coming years.
