## Abstracts

### Market Overview:

The global coronary stents market size reached US\$ 10.5 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 15.2 Billion by 2028, exhibiting a growth rate (CAGR) of 6.3% during 2023-2028.

Coronary stents are small, self-expanding tubular metallic devices introduced inside narrow coronary arteries to keep them open after a balloon angioplasty procedure. These stents are coated with a medication, which is slowly released to prevent the walls of arteries from plaque buildup and re-narrowing. They also alleviate heart disease symptoms, such as chest pain and shortness of breath, and allow normal flow of blood and oxygen to the heart. As they are minimally invasive (MI) and require shorter recovery time, coronary stents are gaining traction over coronary artery bypass surgeries around the world.

### Coronary Stents Market Trends:

The growing incidence of diabetes, obesity and high blood pressure (BP) is escalating the risk of atherosclerosis disease. This, along with the rising geriatric population, which is more likely to develop cardiovascular diseases (CVDs), represents one of the significant factors impelling the growth of the coronary stent market. Apart from this, the growing popularity of minimally invasive surgeries (MIS) is resulting in the increasing adoption of coronary stents that involve small incision wounds, short hospital stays and fast recovery. Other factors contributing to the market growth include the development of bifurcated stents, improving healthcare infrastructure and rising manufacturing of

products using biodegradable materials. Furthermore, the leading market players are introducing advanced products, which is anticipated to drive the market in the coming years.
