## **Abstracts**

The global data center liquid cooling market size reached US\$ 2.4 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 8.2 Billion by 2028, exhibiting a growth rate (CAGR) of 22.38% during 2023-2028.

Data center liquid cooling is used for maintaining the temperature of hardware, such as memory, discs, and central processing units (CPUs), in non-conductive dielectric liquids that serve as coolants for the system. It enables operators to build smaller facilities and accommodate processing-intensive edge deployments at restricted places. It offers improved thermal transmission qualities and reduced energy output as compared to air cooling systems. At present, data center liquid cooling finds application in the healthcare, oil and gas, banking, financial services and insurance (BFSI), healthcare, education, and government industries across the globe.

Data Center Liquid Cooling Market Trends:

Rapid digitization and the increasing adoption of cloud computing systems in numerous organizations represent one of the major factors driving the demand for data center

liquid cooling systems across the globe. In addition, initiatives undertaken by governments of numerous countries to promote the use of green data centers and minimizing carbon footprints are contributing to the market growth. Moreover, the rising number of data centers is favoring the growth of the market. Apart from this, the advent of next-generation processors that are integrated with artificial intelligence (AI) and machine learning (ML) technologies is increasing the adoption of data center liquid cooling systems worldwide. Furthermore, data center liquid cooling systems are employed in the telecommunication sector for enabling consumers to install more communication equipment. Besides this, key players are focusing on mergers and acquisitions (M&A) to expand their market position by developing an ultra low carbon footprint data center and offering unlimited scalability of collocation space and power for business enterprises and hyper scale cloud operators for better operation management of cloud clusters. Additionally, significant improvement in the information technology (IT) infrastructure is anticipated to strengthen the growth of the market.
