## **Abstracts**

The global data quality tools market size reached US\$ 2.0 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 7.6 Billion by 2032, exhibiting a growth rate (CAGR) of 15.5% during 2024-2032.

Data quality tools refer to various software applications that are used for analyzing datasets and converting them into meaningful information to identify and resolve problems. The tools perform functions such as data validation, standardization, monitoring, enrichment, cleansing, matching, parsing and data profiling. They are used by the organizations for processing data related to consumer behavior, products, suppliers, finances and marketing. They also aid in enhancing the accuracy,

completeness and consistency of the information across various departments in the organization. Owing to this, these tools find extensive applications across various industries, including banking, financial services and insurance (BFSI), information technology (IT), telecommunications, healthcare, retail and manufacturing.

Significant growth in information technology (IT) industry is one of the key factors driving the growth of the market. Furthermore, the emerging trend of digitization across the globe, which has led to the creation of large volumes of digital business data, is also providing a boost to the market growth. In line with this, widespread adoption of data quality tools that are combined with data integration systems and mobile device management (MDM) products to create structured processes, manage tasks, track problems and maintain workflow efficiency in the organization, is also contributing to the market growth. Additionally, increasing product utilization in the healthcare and life science sectors is acting as another growth-inducing factor. Data quality tools are being increasingly used to maintain patient records, inventory, hospital systems, administration information and financial data. Apart from this, the development of cloud-based data quality tools and increasing integration with the Internet of Things (IoT) is also impacting the market growth positively.
