Abstracts

The 7 major deglutition disorders markets are expected to exhibit a CAGR of 4.1% during 2024-2034.

The deglutition disorders market has been comprehensively analyzed in IMARC's new report titled "Deglutition Disorders Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Deglutition disorders, also known as dysphagia, refer to difficulties or abnormalities in the process of swallowing food or liquids. Some of the common symptoms include experiencing pain or discomfort while swallowing, coughing or choking during or after eating or drinking, regurgitation of food, unintended weight loss, etc. Individuals suffering from the ailment may also exhibit changes in their eating habits, such as avoiding certain foods or liquids, taking longer to finish meals, showing signs of aspiration pneumonia (e.g., recurrent chest infections), etc. The diagnosis of deglutition disorders involves a comprehensive evaluation by healthcare professionals, typically including speech-language pathologists, gastroenterologists, and sometimes neurologists. The diagnostic process often begins with a detailed medical history and a discussion of the patient's symptoms and eating difficulties. Various other procedures, such as fiberoptic endoscopic evaluation of swallowing (FEES) and videofluoroscopic swallowing study (VFSS), are also performed, allowing real-time visualization of the swallowing process to identify any abnormalities. High-resolution manometry may be used to assess esophageal motility. Additionally, a modified barium swallow study may be conducted to determine the safety and efficacy of swallowing different consistencies of food and liquids.

The increasing cases of various neurological conditions, such as Parkinson's disease, multiple sclerosis, muscular dystrophy, etc., that can affect the coordination and

strength of the swallowing muscles are primarily driving the deglutition disorders market. Besides this, the rising incidences of several associated risk factors, including anatomical abnormalities in the throat, esophagus, or upper gastrointestinal tract, uncontrolled contractions of the pharynx, post-surgical complications, etc., are creating a positive outlook for the market. Moreover, the widespread adoption of numerous anticholinergic medications, such as atropine, glycopyrrolate, scopolamine, etc., for regulating nerve impulses and improving swallowing function in patients is further bolstering the market growth. Apart from this, the inflating application of dysphagia therapy, which involves exercises and techniques to enhance the strength of the swallowing muscles as well as reduce the risk of aspiration, is acting as another significant growth-inducing factor. Additionally, the ongoing advancements in customized swallowing devices, including the introduction of intraoral prosthetics and tongue depressors, that can optimize swallowing mechanics and support the coordination of oral and pharyngeal phases are expected to drive the deglutition disorders market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the deglutition disorders market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for deglutition disorders and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the deglutition disorders market in any manner.
