## Abstracts

The global dental chair market reached a value of US\$ 489.7 Million in 2021. Looking forward, IMARC Group expects the market to reach US\$ 657.8 Million by 2027, exhibiting a CAGR of 5.1% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

A dental chair is a specialized medical chair that can operate manually or automatically. It is equipped with a doctor table and control panel, instrument holder, balance arm, cuspidor bowl, and a foot controller. It helps enhance flexibility and offer comfort to patients and dental practitioners during examination, extraction and performing oral surgeries. It is widely available in numerous designs, including ceiling-mounted, mobile independent, and dental chair mounted. At present, its demand is increasing across the globe as it is highly durable and requires minimal maintenance.

### Dental Chair Market Trends:

Due to sedentary lifestyles and the growing number of individuals who smoke, there is a significant rise in the prevalence of oral diseases and dental disorders worldwide. This represents one of the key factors strengthening the growth of the market. Besides this, there is an increase in the adoption of dental esthetics due to their numerous benefits, including improving the visual appearance and function of the teeth and jaws by utilizing biologic technology for long-term survival and mimicking the pristine state of natural dentition. This, along with the escalating need for patient comfort during these surgeries, is positively influencing the utilization of dental chairs around the world. Furthermore, leading manufacturers are introducing technologically advanced dental chairs that are embedded with handpieces, intraoral cameras, ultrasonic cleaning

devices, curing lights, and other tools. These chairs are also incorporated with computer controls and electronics with memory functions that assist in streamlining the tasks of dental surgeons, which is creating a favorable market outlook. Other factors, including a rapid increase in dental surgeries, a rising number of programs spreading awareness about optimal oral health and hygiene, and continuously improving healthcare infrastructure, are propelling the market growth.
