Abstracts

The 7 major diabetic neuropathy markets reached a value of US\$ 2.9 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 4.9 Billion by 2034, exhibiting a growth rate (CAGR) of 5.1% during 2024-2034.

The Diabetic Neuropathy market is currently exhibiting strong growth. Current estimates suggest that 45%-50% of patients with diabetes will eventually develop neuropathy during their lifetimes. Driven by sedentary lifestyles, poor dietary habits, obesity, lack of physical activity, etc. we expect the number of individuals suffering from diabetes to grow robustly over the long term. This is expected to create a positive impact on the market for Diabetic Neuropathy. Furthermore, the market is also expected to be driven by several late-stage pipeline drugs with strong efficacy and safety profiles. Additionally, early diagnosis and treatment of Diabetic Neuropathy are also creating a positive impact on market growth.

Diabetic neuropathy represents a serious and common complication of diabetes. It's a type of nerve damage that is caused by long-term high blood sugar levels. Depending on the affected nerves, diabetic neuropathy symptoms may include pain and numbness in the legs, feet, and hands. It may also result in problems with the digestive system, urinary tract, blood vessels, and heart. Some patients have mild symptoms. But for many others, however, diabetic neuropathy can be quite agonizing and painful. There are different types of diabetic neuropathy that may affect different areas of the body, causing several symptoms. Diabetic neuropathy currently doesn't have a cure, but patients can reduce its progression. Keeping blood sugar levels within a healthy range represents the best way to reduce the likelihood of developing diabetic neuropathy and slowing its progression.
