Market Overview:

The global digital banking platform market size reached US\$ 5.8 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 12.2 Billion by 2028, exhibiting a growth rate (CAGR) of 12.5% during 2023-2028.

A digital banking platform (DBP) refers to financial services provided solely online by banks. It relies on process automation, application programming interfaces (APIs), and web-based services to serve customers through online channels. DBP involves the digitization of all traditional banking services and products, including funds transfer, bill payments, cash withdrawals, loan management, and opening deposit accounts. It also offers features and capabilities, such as checking and savings account, real-time transaction notifications, scheduling expenditures, obtaining bank statements, promoting cardless payments, and remotely monitoring personal finance management (PFM) and account-to-account (A2A) payments. DBP is easy, convenient, and quick to use and enables users to control and handle everyday financial operations using mobile phones, laptops, and desktops.

Digital Banking Platform Market Trends:

The increasing shift from traditional banking to online banking platforms represents one of the major factors driving the market growth. DBP provides instant transactions with enhanced security to the customer, thus making the platform more reliable and efficient. In line with this, the increasing penetration of the internet and smartphones due to the growing need for improved transparency and flexibility in banking operations is favoring

the market growth. Apart from this, the utilization of machine learning (ML) and artificial intelligence (AI) in digital banking platforms to detect and prevent payment frauds, assess risks, improve processes for anti-money laundering (AML), and perform know-your-customer (KYC) regulatory checks are providing an impetus to the market growth. Additionally, the increasing demand for enhanced customer experience and convenience and the widespread adoption of cloud-based solutions by banks and financial institutions to obtain higher scalability is creating a positive outlook for the market. Other factors, including extensive research and development (R&D) activities and the implementation of various government initiatives promoting a cashless economy, are anticipated to drive the market toward growth.
