The global disinfection robots market size reached US\$ 1,177.8 Million in 2023. Looking forward, IMARC Group expects the market to reach US\$ 12,778.5 Million by 2032, exhibiting a growth rate (CAGR) of 29.42% during 2024-2032.

Disinfection robots are employed for cleaning rooms, spaces and equipment and keeping them hygienic. They prevent the spread of hospital-acquired infections (HAIs) and aid in improving patient safety and medical service quality. They are easy to install, convenient to operate, cause minimal errors compared to manual cleaning methods, and allow apparent cost savings by reducing the need for cleaning staff. As a result, disinfection robots are used in shopping malls, theaters, airports, educational institutes, hospitals, clinics, laboratories, and research institutes across the globe.

Disinfection Robots Market Trends:

The rising prevalence of various chronic disorders, coupled with a significant surge in HAIs, represents one of the key factors positively influencing the market. In addition, the increasing awareness among healthcare professionals about the benefits offered by disinfection robots over manual disinfection is providing a thrust to the market growth. Apart from this, the expansion of hospitals, clinics, surgical centers, and research laboratories is catalyzing the demand for disinfection robots across the globe.

Furthermore, there is a rise in the focus of numerous key players on introducing automated and innovative products equipped with advanced features, technologies, and software. They are also focusing on strategic collaborations with private and public healthcare centers to expand their market reach and increase overall sales. Besides this, the widespread adoption of advanced and well-designed portable robots is offering lucrative growth opportunities to key players. Additionally, governments of various countries are increasingly investing in the development of healthcare infrastructure, which is propelling the market growth. Moreover, the increasing use of disinfection robots in restaurants and hotels to disinfect the dining area, corridor, and other spaces is strengthening the market growth.
