## Abstracts

The global disposable medical sensors market size reached US\$ 7.31 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 12.9 Billion by 2027, exhibiting a growth rate (CAGR) of 10.0% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic. These insights are included in the report as a major market contributor.

Disposable medical sensors refer to single-use, hand-held and portable scanning devices used for diagnosis, patient monitoring and therapeutic applications. They are usually integrated into stationary medical devices for on-site patient observation and remote monitoring. Some of the commonly used disposable medical sensors include accelerometers, pressure, temperature, image and biosensors, which are placed on strips, wearable, implantable, invasive and ingestible sensors. These devices detect and transmit information regarding vital signs, such as heart rate, oxygen levels, pulse rate and temperature, in the form of electrical signals. As a result, they are widely used for various cardiological, radiological, neurological, ophthalmological and urological procedures.

Disposable Medical Sensors Market Trends:

The increasing prevalence of chronic medical ailments, such as cancer, diabetes, asthma and stroke, is one of the key factors driving the growth of the market. Moreover, widespread adoption of at-home and point-of-care (PoC) diagnostic devices for the monitoring of elderly and post-operative rehabilitation patients is providing a thrust to the market growth. Disposable medical sensors are highly cost-effective, convenient to use and provide prompt and accurate results. In line with this, rising instances of

hospital-acquired infections (HAIs), which can be prevented by using single-patient disposable medical sensors, are also contributing to the market growth. Additionally, various technological advancements, such as the development of carbon nanotube-based biosensors, which are used for the detection of E. coli and other pathogens, are acting as other growth-inducing factors. Product manufacturers are also integrating micro-technologies, such as medical Micro-Electro-Mechanical Systems (MEMS), microfluidic chips and lab-on-a-chip systems for monitoring of the patients with enhanced precision. Other factors, including rising expenditure capacities of the masses, along with extensive improvements in the healthcare infrastructure, especially of the developing economies, are anticipated to drive the market toward growth.
