## Abstracts

The global drug-eluting stents market size reached US\$ 7.8 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 11.4 Billion by 2028, exhibiting a growth rate (CAGR) of 6.31% during 2023-2028.

A drug-eluting stent (DES) is a coronary device that is used for the slow release of drugs in peripheral or coronary arteries to block cell proliferation and promote a healthy flow of blood. It consists of a metallic stent, polymer coating and anti-restenosis drug. The stent is coated with medications that assist the arteries to remain smooth and ensure adequate blood flow. DES is widely used to treat blockages in heart arteries, prevent plaque buildup, blood clots and reduce repeated revascularization. The stent is minimally invasive (MI) and offers lower restenosis rates, enhanced vessel healing and reduced need for prolonged dual antiplatelet therapy.

### Drug-Eluting Stents Market Trends:

The rising geriatric population prone to chronic medical ailments is one of the key factors driving the growth of the market. DES is widely utilized in patients with a high risk of developing arterial disorders as the stents aid in reducing the need for invasive procedures, such as coronary artery bypass surgeries. Additionally, the increasing prevalence of cardiovascular diseases due to the unhealthy dietary patterns, lack of physical activity and sedentary lifestyles of the masses is favoring the market growth. Moreover, various technological advancements, such as the launch of bioresorbable stents, are providing a thrust to the market growth. These stents are easily dissolvable in the body and reduce the risk of developing stent thrombosis. In line with this, the widespread adoption of stents with polymer-free coatings is positively impacting the market growth. These stents exhibit a higher drug loading capacity and quicker drug-

eluting rate. Other factors, including the rising incidence of abnormal heart rhythms, heart failure and heart attack disease, along with the increasing demand for MI techniques among the masses, are anticipated to drive the market toward growth.
