Abstracts

The global education PC market size reached US\$ 17.6 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 44.2 Billion by 2032, exhibiting a growth rate (CAGR) of 10.5% during 2024-2032. The increasing popularity of smart teaching techniques and the rising demand for digital learning solutions represent some of the key factors driving the market.

A personal computer (PC) is a cost-effective, digital multi-purpose electronic device explicitly designed to be utilized by a specific individual at a time for sharing or saving files and performing complex tasks instantly and accurately. It is utilized by various educational institutions as a digital medium to deliver multiple accessible files, including animated videos, presentations, e-books, files, engaging notes, and portable document formats (PDFs). Education PC offers personalized knowledge, influences career decisions, ensures student engagement, provides access to information, enhances creativity, enables teachers to analyze student's achievements and progress, and allows collaboration with peers. Along with this, education PC saves time and effort, offers optional convenience and flexibility, helps with communication, and resolves doubts in real time. Consequently, education PC finds extensive application in the dissemination of knowledge and information through online lectures and self-paced courses.

Education PC Market Trends:

The widespread adoption of smart teaching platforms and various consumer electronic products, such as laptops, tablets, and desktops, by several educational institutions to

deliver interactive modules and videos for teaching purposes represents one of the key factors driving the market growth. In line with this, the shifting user inclination toward digital learning over traditional teaching methodologies is contributing to the market growth. Moreover, the rapid outbreak of COVID-19 and the consequent implementation of worldwide lockdowns metamorphosized the way education was imparted. This, in turn, resulted in the accelerated adoption of digital learning tools, which facilitated the sales of education PC. Additionally, the extensive utilization of learning management systems (LMS) and learning content management systems (LCMS) by educational content creators to create or update multiple lessons accurately is supporting the market growth. The large-scale integration of virtual and augmented reality (VR/AR), artificial intelligence (AI), and three-dimensional (3D) animation technologies into educational concepts and devices for offering immersive learning experiences to students is propelling the market growth. Furthermore, the rising skill gap and the escalating need for proficient working employees have facilitated the demand for education PC across small and medium-sized enterprises (SMEs) to hone technical skills, which is favoring the market growth. Other factors, such as the advent of work-from-home (WFH) and bring-your-own-device (BYOD) models, the rising popularity of massive open online courses (MOOCs), increasing penetration of smart devices, and the easy availability of high-speed internet, are creating a positive outlook for the market.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the global education PC market, along with forecasts at the global, regional, and country level from 2024-2032. Our report has categorized the market based on product and application.

Product Insights:

Laptops

Desktop

Tablets

The report has also provided a detailed breakup and analysis of the education PC market based on the product. This includes laptops, desktop and tablets. According to the report, laptops represented the largest segment.

Application Insights:

Primary Education

Secondary Education

Higher Education Others

A detailed breakup and analysis of the education PC market based on the application has also been provided in the report. This includes primary, secondary, higher education and others. According to the report, higher education accounted for the largest market share.
