## Abstracts

The global enterprise application market reached a value of US\$ 249.9 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 403.9 Billion by 2027, exhibiting a CAGR of 8.24% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use industries. These insights are included in the report as a major market contributor.

Enterprise applications include digital and content creation, communication and collaboration software, customer relationship management (CRM), and enterprise resource planning (ERP). They are scalable, component-based, data-centric, and user-friendly. They are used to integrate core business processes, such as sales, finance, accounting, inventory, human resources, and manufacturing, on a single server architecture in real-time. They provide the advantages of office suites, project and portfolio management, and supply chain management (SCM). Consequently, they are deployed in corporate networks to automate business processes with large amounts of complex data and connect enterprises with suppliers, commercial entities, and customers across the globe.

### Enterprise Application Market Trends:

Due to the expansion of business globally, enterprises are facing challenges in managing large amounts of data. This represents one of the key factors driving the adoption of enterprise applications worldwide as they provide enhanced collaboration, improved efficiency, reduced risk, connected data, and real-time insights to build a smart business. Moreover, they are employed in the banking, financial services, and insurance (BFSI) sector to make a balanced financial structure and hire qualified talent.

Apart from this, the integration of technologies like artificial intelligence (AI), the internet of things (IoT), and edge computing are providing agility to make critical decisions, optimize investments to fund innovation, and deliver essential customer experiences. This is further expanding the usage of enterprise applications in various end use industries. Furthermore, due to the growing focus on rapid innovation and continuation, organizations are deploying and managing ERP software across hybrid cloud solutions, which, in turn, is catalyzing the demand for enterprise applications around the world. Additionally, several vendors are providing customization options to upgrade various features of enterprise applications, which is anticipated to impel the growth of the market.
