Abstracts

The global finance cloud market size reached US\$ 33.6 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 109.6 Billion by 2028, exhibiting a growth rate (CAGR) of 21% during 2023-2028.

Finance cloud is an integrated platform that allows users to automate, streamline, simplify, and evaluate various financial operations using core information technology (IT) and flexible software as a service (SaaS) solution. It is usually offered on a subscription basis and helps eliminate large, upfront capital expenditures for systems software, computer hardware, and accounting application software licenses. Nowadays, it is gaining adoption in large finance organizations worldwide as the finance cloud delivers a higher return on investment (ROI), multi-dimensional financial analysis, and mobile access to enterprise collaboration.

Finance Cloud Market Trends:

Finance companies are currently focusing on digitally transforming their financial software services operations with contemporary cloud and IT modernization standards for better data mining, automation, and security. This represents one of the key factors promoting the adoption of the finance cloud to create a single customer database for automating billing, revenue management, and other core financial processes. Besides this, an on-premises system is a laborious process that results in massive miscommunication and waste of time as well as resources. As a result, businesses are shifting workloads from on-premises hardware to cloud financial management as it provides access to the data from anywhere in real-time. Moreover, the escalating need for cloud solutions for financial services, such as core banking, customer experience, point of sale (POS), and digital payments, amid the coronavirus disease (COVID-19) pandemic is influencing the market positively. Apart from this, due to the growing

instances of data breaches, service providers are providing multilayered security, such as identity management, network security, and threat detection and response. This helps protect sensitive data, including customer Personal Identifiable Information (PII), records, transaction data, and payment card information,
