Abstracts

The global floor coatings market size reached US\$ 2.7 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 3.9 Billion by 2028, exhibiting a growth rate (CAGR) of 6.32% during 2022-2028.

Floor coatings are tough, protective layers used wherein heavy surface wear or corrosion is expected. They protect the floor from moisture, cracks and provide a high-performance, smooth, and durable surface that withstands heavy loads for several years. They also assist in brightening or defining areas of facilities, marking traffic aisles, routing traffic, and covering stained concrete. As a result, they find a wide range of applications in warehouses, hospitals, manufacturing and industrial plants, showrooms, commercial and retail stores, garages, and airplane hangars across the globe.

Floor Coatings Market Trends:

At present, there is a considerable rise in the utilization of floor coatings in the chemical industry to ensure high-performance flooring for research and development (R&D) labs, production plants, and other facilities. This represents one of the key factors strengthening the growth of the market. Moreover, floor coatings also provide chemical resistance, strict hygiene and adhere to safety protocols for avoiding the risks of damage, accidents and protecting the health of workers. They also have various beneficial properties, including high impact and extreme abrasion, to protect floors. Consequently, they are increasingly being utilized in the manufacturing industry around the world. Additionally, there is a significant increase in the risk of microbial growth due to spillage in the food and beverage (F&B) industry. As these contaminants degrade the purity of the processed food, there is a rise in the demand for durable and thick floor coatings to provide a protective barrier and ensure a hygienic surface. Other major

factors, including the thriving construction industry on account of rising infrastructural developments and the escalating demand for tile flooring in residential and commercial applications, are anticipated to create a favorable market outlook.
