Abstracts

The global FMCG logistics market size reached US\$ 1,175.0 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 1,621.7 Billion by 2032, exhibiting a growth rate (CAGR) of 3.54% during 2024-2032.

Fast-moving consumer goods (FMCG) logistics refers to professional fleet management solutions that monitor and control the transportation of various products from location to desired storage or destination. It relies on diverse technologies and third-party or fourth-party logistics (3PL/4PL) to perform diverse value-added functions involving storing and warehousing inventory materials, liquids, foods, and household items. FMCG logistics assist in meeting consumer expectations by ensuring the flow of goods, managing daily activities concerning the transportation of usable products, and offering scalability and preventive maintenance. Apart from this, it provides real-time product visibility and risk management solutions, increases business profitability, and ensures product quality during shipping at a reduced cost. As a result, FMCG logistics are utilized by industries to manage supply chain operations effectively. Currently, it covers railways, seaways, roadways, and airways as standard transportation mediums.

FMCG Logistics Market Trends:

The considerable expansion in the e-commerce sector, owing to the increasing product

purchase from various online distribution channels, especially during the COVID-19 pandemic, is primarily driving the market growth. Such solutions and procedures help achieve the needs of rapid supply chains and exert tight price monitoring technologies to compete and manage fluctuating warehouse requirements triggered by seasonal trends. In line with this, the implementation of direct-to-consumer (D2C) initiatives by FMCG companies to mitigate the need for mediators is further supplementing the product demand. Moreover, the advent of advanced technologies in logistics, such as the Internet of Things (IoT) robots and the integration of machine learning (ML) and big data to reduce lead time, is supporting the market growth. Additionally, the ongoing development of logistics automation solutions with a last-mile delivery feature by key players to move perishables is propelling the market growth. Apart from this, rapid urbanization, evolving consumer preferences, and the growing proliferation of smartphone and internet users are positively augmenting the market growth.
