Abstracts

The global healthcare cold chain logistics market size reached US\$ 17.1 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 20.9 Billion by 2028, exhibiting a growth rate (CAGR) of 3.3% during 2023-2028.

Healthcare cold chain logistics is a system allowing temperature-controlled packaging, storage, and transportation of temperature-sensitive products. It relies on cold insulated transport vehicles, such as refrigerated trucks, railcars, freight, and air cargo, to preserve the efficacy and increase the shelf life of various vaccines, medicines, biopharmaceuticals, and samples. It provides reliable information to pharmaceutical companies about the products when communicating with regulatory agencies and reduces losses from damaged biomedical products.

Healthcare Cold Chain Logistics Market Trends:

At present, there is a rise in the utilization of healthcare cold chain logistics to preserve healthcare products across the globe. This, along with the expanding pharmaceutical industry, represents one of the key factors driving the market. Moreover, there is an increase in the need for proper storage and transportation of drugs in the healthcare sector without reducing the efficiency of drugs. This, coupled with several benefits provided by healthcare cold chain logistics, such as seamless integration of activities during transportation and delivery, is propelling the growth of the market. In addition, the escalating demand for biopharmaceuticals, vaccines, and clinical trial materials due to the growing prevalence of numerous diseases are positively influencing the market. Besides this, governments of several countries are implementing stringent regulations for the efficient handling of temperature-sensitive pharma products around the world. In line with this, the rising reliance on healthcare cold chain logistics to store vaccines under controlled temperatures for vaccination drives is bolstering the market growth.
