Abstracts

The global home healthcare market size reached US\$ 360.2 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 599.9 Billion by 2028, exhibiting a growth rate (CAGR) of 9.02% during 2023-2028.

Home healthcare involves a range of medical or non-medical professional services that allow caregivers to offer various nursing, medical and physical therapies to patients in residential settings to treat injuries or diseases. It uses mobility care, therapeutic diagnostic, medical kits, and common dose administration equipment as standard devices that are used in rehabilitation, infusion, and respiratory therapies. As compared to hospitals, home healthcare is more cost-effective and comfortable and provides better treatment outcomes, intensive care, and access to nurses, friends, and family during psychological trauma or surgeries. Apart from this, it supports activities of daily living, ensures medication management, reduces the risk of infections, offers customized and personalized services, and improves health with initial treatments. As a

result, home healthcare is extensively utilized by clinics, hospitals, and sole traders to deliver quality and treat cancer, wound care, diabetes, and hypertension indications.

Home Healthcare Market Trends:

The increasing prevalence of various chronic and cardiovascular disorders (CVDs) due to the growing instances of communicable diseases amongst individuals, especially during the COVID-19 pandemic, is primarily driving the market growth. In line with this, the rising need for effective treatments at reduced hospitalization costs, such as telehealth, and the escalating shortages of intensive care units (ICUs) in hospitals are acting as other growth-inducing factors. Additionally, the advent of several home healthcare monitoring technologies, including pulse oximeters and temperature and blood pressure assessment solutions, along with the integration of the Internet of Things (IoT), point-of-care devices, and wearable gadgets, are propelling the market growth. Moreover, the ongoing development of at-home diagnostics kits with self-administered testing solutions and the fueling consumer awareness regarding its easy availability are favoring the market growth. Apart from this, significant enhancements in the healthcare infrastructure, favorable government reimbursements, and the emergence of home nursing care systems are positively augmenting the market growth.
