Market Overview:

The global immunohematology market size reached US\$ 1.9 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 2.5 Billion by 2028, exhibiting a growth rate (CAGR) of 4.7% during 2023-2028.

Immunohematology refers to a branch of medical sciences that studies blood and blood-forming tissues in relation to the immune system. It is used to study the presence of antigens in the blood and their reaction with antibodies that can either cause hemolysis or red blood cell (RBC) agglutination. Various immunohematology tests are conducted to ensure safe blood transfusion and prevent undesired immunity-, transplant-, and pregnancy-related reactions, and to diagnose blood related disorders and diseases such as HIV, Hepatitis, etc. They utilize various chemicals and devices, such as reagents, and automatic and semi-automatic analyzers that are based on the technology of microplates, biochips, gel cards, polymerase chain reaction and erythrocyte-magnetized technology (EMT).
