Abstracts

The Indian aqua inputs and supplements (for shrimps) market size reached INR 30.3 Billion in 2022. Looking forward, IMARC Group expects the market to reach INR 62.8 Billion by 2028, exhibiting a growth rate (CAGR) of 12.5% during 2023-2028.

Aqua inputs and supplements refer to the chemical substances, including antibiotics, that are utilized for shrimp health management. These substances protect shrimps from vibriosis and other luminescent bacteria, along with preventing any disease outbreak during the farming period. In India, these chemicals are increasingly being used in shrimp aquaculture to ensure a healthy and sustainable environment for shrimp.

Over the years, India has emerged as one of the leading shrimp producers in the world which has given a boost to the aquaculture activities in the country. In addition to this, the rising consumer health consciousness has led to a shift from high-calorie diet to protein-rich seafood, such as shrimps. Owing to this, several manufacturers are introducing improved and effective chemical products targeting shrimp aquaculture. Moreover, India is also one of the low-cost producers of medicines, drugs, and supplements, this has enabled India to become an economical producer of aqua inputs and supplements, thereby proliferating the export activities.
