Abstracts

The India breath analyzer market size reached USD 264.3 Million in 2024. Looking forward, IMARC Group expects the market to reach USD 2,039.9 Million by 2033, exhibiting a growth rate (CAGR) of 24.22% during 2025-2033.

Breath analyzers are utilized for detecting alcohol and drug content present in the body. They are handheld medical devices that operate by passing a sample of exhaled breath through a solution of sulfuric acid and dichromate. They are efficient, easy to use and provide accurate results on the spot. At present, there is a significant rise in the demand for digital breath analyzers in India.

The increasing utilization of breath analyzers by government authorities and healthcare sectors on account of the growing number of road accidents in India represents one of the key factors bolstering the market growth. Apart from this, there is a rise in the demand for alcohol in the country due to inflating disposable incomes, changing lifestyles and the growing western influence. This has resulted in the expanding drinking rate and boosting sales of breath analyzers in the country.
