Abstracts

The India chimneys & built-in hobs market size reached INR 19.7 Billion in 2022. Looking forward, IMARC Group expects the market to reach INR 42.7 Billion by 2028, exhibiting a growth rate (CAGR) of 13.7% during 2023-2028.

Chimney, or kitchen hood, refers to an appliance that absorbs fumes/smoke produced in the kitchen. On the other hand, built-in hobs are the gas stovetops that are permanently installed on the kitchen counter surface. Both chimney and built-in hobs are among popular additions in the modular kitchens as these appliances help in keeping the kitchen clean, along with adding style and decor. The cooking method of Indian food entails lots of sautéing and frying. The spluttering mixture of the spices and frying of ingredients produce clouds of fumes filled with oil, spices, organic matter, moisture, and leave its impression on the kitchen ceiling and tiles. In such conditions, kitchen chimney acts as an essential ventilation device that vents out smoke, moisture, grease filled-air, food particles, etc., and reduces indoor pollution. Furthermore, built-in hobs provide convenience, better safety, and faster cooking. Owing to this, these kitchen appliances are widely installed in households, restaurants, cafes, and other eateries across India.

One of the primary factors driving the market growth is the surging adoption of modular kitchen appliances in urban and semi-urban areas of the country. Besides this, the high demand for such appliances is buoyed by the rising living standards of the consumers supported by their increasing disposable income levels. This has led to the wide availability of such appliances, at varied price ranges, catering to different income group consumers. Furthermore, rapid urbanization, coupled with the increasing construction of villas, luxury apartments, and renovation of existing kitchens, are significantly boosting

the sales of premium-quality kitchen appliances in India. Various technological advancements, along with the increasing penetration of smart devices, have led to the launch of smart kitchen appliances with wireless connectivity options. These appliances can be controlled remotely through wireless, internet, or bluetooth-based devices, thereby are being widely installed, particularly in smart homes. Other than this, the rising health-consciousness, especially among the urbanized and millennial population, has bolstered the demand for kitchen appliances for maintaining hygienic and oil/smoke-free cooking conditions, thereby propelling the market growth. Moreover, their wide availability across various online and offline distribution channels, coupled with the growing popularity of advanced and modular products, will continue to fuel the growth of the Indian chimneys and built-in hobs market in the coming years.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the India chimneys & built-in hobs market report, along with forecasts at the country and regional level from 2023-2028. Our report has categorized the market based on type and end-user.
